

## SAFETY PRACTICES & PRECAUTIONS

- 1) NEVER LEAVE THE GRILL UNATTENDED WHILE COOKING.
- 2) WHEN IN USE, PORTIONS OF THE GRILL ARE HOT ENOUGH TO CAUSE SEVERE BURNS.
- 3) All service on this grill should be performed by a qualified technician.
- 4) Never use natural gas in a unit designed for liquid propane or visa versa.
- 5) Children should not be unattended or alone in an area where a grill is located. Place your grill well away from areas where children play. Do not store items that may interest children in or around the grill, in the cart or masonry enclosure. When in use, portions of the grill are hot enough to cause severe burns.
- 6) Have an ABC Fire Extinguisher accessible - never attempt to extinguish a grease fire with water or other liquids.
- 7) Insure that the gas supply hose is free of kinks and at least 3" away from hot surfaces.
- 8) Do not heat unopened food containers as a build-up of pressure may cause the container to burst.
- 9) Never store additional or empty propane cylinders in the grill cabinet or around the grill. Do not store propane cylinders indoors or on their sides.
- 10) Do not use aluminum foil to line drip pans or grill racks. This will change combustion airflow or trap excessive heat in the control area. This can result in melted knobs and melted igniters.
- 11) Whenever the grill burners have been removed, follow the installation instructions.
- 12) Avoid wearing long sleeves or loose-fitting garments while using the grill. Never touch the grill racks, hood or immediate surrounding metal surfaces with your bare hands as these areas become extremely hot during use and could cause burns. Use an insulated glove or mitt when opening and operating the grill. Open grill lid slowly to allow heat and smoke to escape before fully opening. Never lean over hot grill surface or look directly into the grill when attempting to light.
- 13) The grill hood must be fully opened when lighting.
- 14) Never use charcoal in the grill. Never operate the grill in a windy area, if windy conditions exist, install a suitable windbreak.
- 15) Cooking excessively fatty meats and other such products will cause flare-ups. Internal fires or damage caused by flare-ups or the grill being left unattended while cooking, are not the responsibility of AHT and any resulting damage is not covered under the terms and conditions of our Warranty.
- 16) Grease is extremely flammable. Let hot grease cool down before attempting to handle or dispose of it. The drip tray should be cleaned of grease on regular basis.
- 17) Always adhere to the required clearances from combustibles as detailed. The grill is designed for outdoor use only. Never operate in a garage, building, shed, breeze way or other enclosed area.
- 18) Never grill without the drip pan in place. The drip pan must be pushed all the way to the back of the grill. Without the drip pan in place, hot grease could leak downward and produce a fire explosion hazard.
- 19) Store your grill in a well-ventilated area. Remove the LP cylinder, if so equipped, and store it outdoors in a well-ventilated area away from heat and away from where children may tamper with it.
